

## UC Keystone Cultivar (2023 release)

This is a new day neutral cultivar from the UC Davis Strawberry breeding program. The initial breeding cross originated in 2017 and the selection 17C138P062 was made. It was subsequently tested as that number from 2019-2022. This cultivar is a mid to late-season day neutral variety with excellent post-harvest qualities.

UC Keystone produces equal to higher yields and % marketable fruit relative to UC's four main commercial day neutral cultivars (Monterey, Cabrillo, UCD Royal Royce, & UCD Valiant). Those four cultivars are all susceptible to Fusarium wilt whereas UC Keystone is resistant. It performs best in fall planted production systems, and it performs equally well when harvested with 400-600 chilling hours from high elevation nurseries and planted directly with no post-harvest chill versus plants given 10-17 days post-harvest chill. Fruit is firm which supports better post-harvest keeping qualities.

UC Keystone is resistant to Fusarium wilt (*Fusarium oxysporum*), moderately resistant to Verticillium wilt (*Verticillium dahlia*) and Phytophthora crown rot (*Phytophthora cactorum*), and moderately susceptible to Charcoal rot (*Macrophomina phaseolina*).

Nursery clone productivity for UC Keystone is equal or superior to that of Monterey, a well-known day neutral cultivar as a comparison.

### Performance of UC Keystone in advanced trials in Santa Maria and Prunedale 2020-2022 (Yield in lbs/acre harvested March-September)

Cultivar	2020 Nipomo Conv	2020 Prunedale Conv	2021 Nipomo Conv	2021 Prunedale Conv	2022 Nipomo Conv	2022 Prunedale Conv	Across Location Yields	Across Location Fruit Size (g/fruit)
